Sr. No	Practical Topic	Date	Sign
1.	Implementation of SOAP services a) Create a Calculator application using Simple SOAP service. Implement basic arithmetic operations viz. multiplication and division. Deploy the service and check the execution with passing proper inputs. b) Create a web application to find addition of a three number using Simple SOAP service. c) Create a web application to find largest of two numbers using Simple SOAP service d) Create a web application to find addition of a two number using Simple SOAP service		
2.	Write a Program to implement web Service to Calculate factorial of a given number. Deploy the above Web service properly and call it by designing appropriate interface in JAVA / .NET		
3.	Write a Program to implement web Service to Convert Currency from Rupees to Dollar. Use following formula for conversion Conversion Rate: 1 USD = 75 INR Deploy the above Web service properly and call it by designing appropriate interface in .NET. / JAVA		
4.	Create a Simple REST Service to demonstrate CRUD operations with “Product” database. Implement the service with fields viz. Product_Name, Quantity, Expiry_date. Deploy the service and execute the operations.		
5.	Create a Simple REST Service to demonstrate CRUD operations with “Employee” database. Implement the service with fields viz. Employee_Name, age, Phone_no, Department. Deploy the service and execute the operations.		
6.	Create a Simple REST Service to demonstrate CRUD operations with “Player” database. Implement the service with fields viz. Player_Name, age, Country, Runs. Deploy the service and execute the operations.		
7.	Create a Simple REST Service to demonstrate CRUD operations with “City” database. Implement the service with fields viz. City_Name, District_Name, Population. Deploy the service and execute the operations.		
8.	Develop application to consume Google’s search / Google’s Map RESTful Web service.		
9.	Develop application to download image/video from server or upload image/video to server using MTOM techniques		
10.	Implement FOSS-Cloud Functionality VSI (Virtual Server Infrastructure) – a) Create a Virtual Machine using available OS and load. b) Create a Storage pool by allocating memory.		
11	Implementation of Openstack with user and private network creation.		
12	Installation and Configuration of virtualization using KVM.
